IMAGE AND VISION COMPUTING

Index to Volume 6 Numbers 1–4 Pages 1–272 1988

1988

Subject index

Algorithm development
  image processing algorithm development system 176

Binary images
  correlation 193

Component labelling
  connected labelling using linear quadtrees 215
  of images 21
Cross-section analysis
  of compact subobjects 33
Curvature measurement
  and the Laplacian 185
Curve recognition
  in noisy grey tone images 262

Depth maps
  recovery using edge-based passive stereo triangulation 91
Digital filtering
  for texture isolation 189

Edge detection
  in grey-scale images 75
  using level crossing curvature 185
  with a corner detection algorithm 121

Geographic information systems
  algorithm to expand regions 162
Geometric reasoning
  for a computer vision program 100
Graphics
  technique for visualization of quaternion slices 235

Image analysis
  extraction of descriptions 59
  in a realtime industrial environment 21
  query-based 247
  using non-heuristic algorithms 3
Image dilation
  dilation algorithms for a linear quadtree 169
Image labelling
  neural network approach 203
Image processing
  algorithm development system 176
  and quaternions 235
  straight line recognition 262
Image registration
  analysis of bilevel quantizers 193
  by local approximation methods 255
Image restoration
  using an adaptive iterative algorithm 151
Image sequences
  extracting conceptual description 59
Image structure
  corner detection 121

Knowledge-based image interpretation
  for restricted scenes 238

Machine vision
  solving geometric constraints 100

Neural networks
  an approach to image labelling 203

Object decomposition
  into compact subobjects 33
Occlusion
  analysis of 3
Optic flow
  computation at edge elements 129

Quadtrees
  algorithm for connected component labelling using linear quadtrees 215
  algorithm to expand regions 162
  dilation algorithms for a linear quadtree 169
  translation of linear quadtrees 13

Region representation
  using improved algorithms 13
Robot vision
  for pick and place 91

Space representation
  for practical reasoning 75
Spatio-temporal reasoning
  in computer vision 247
Stereo imaging
  without camera registration 29
Stereo vision
  using the REVgraph 139
Surface geometry
  from singular points of profiles 225

Texture analysis
  by adaptive digital filtering 189
Three-dimensional geometry
  recovery of 107
Three-dimensional scene representation
  from image sequences 87
Unregistered images
  determination of 29
Visual motion
  from a sequence of images 107
